
Aqualiens

AQUALIENS

Use Your Imagination

Whimsical, inventive and unexpected Aqualiens stimulate spirited, creative play. Abstract shapes suggest butterflies or dinosaurs from another dimension. Fanciful new worlds open up when the translucent, colorful Seeflow™ polymer shapes meet water, sunlight and your imagination. These surprising sculptural pieces encourage fantasy play and promise a completely different experience with each visit.

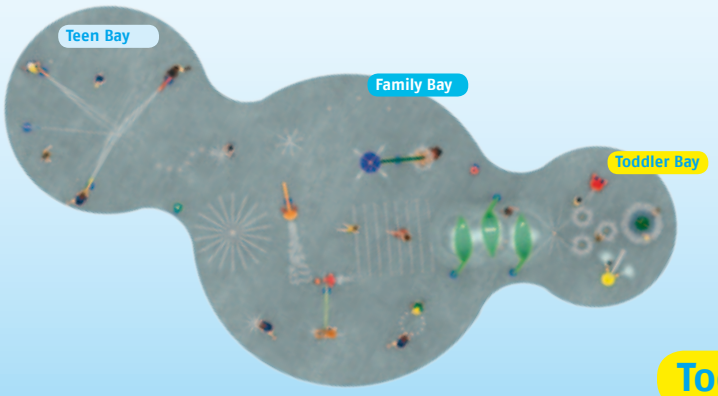
WATERGARDEN

Nature Inspired Organic Design



Toddler Bay

This Toddler Bay is sure to keep the little ones occupied and entertained with Waterbugs that allow toddlers to stand and hold on to.

Copyright © 2010 Vortex Aquatic Structures Intl.

Teen Bay

Multiple Bamboo cannons and a Bamboo play element spraying upwards combined with ground sprays make this bay a dynamic play area.

Family Bay

Find yourself running down a Split Stream to a friendly Dragon breathing water down on you. A series of ground spray games for you and your friends where you can block the streams to make the geyser burst taller!

Watergarden

WATERGARDEN

Nature Inspired and Organic Design

Lyrical in composition, elegant and regal in stature, Watergarden products respond well to organic designs with flowing lines. Just as nature often works in patterns, exquisite Watergarden play areas are realized through balance and composition.

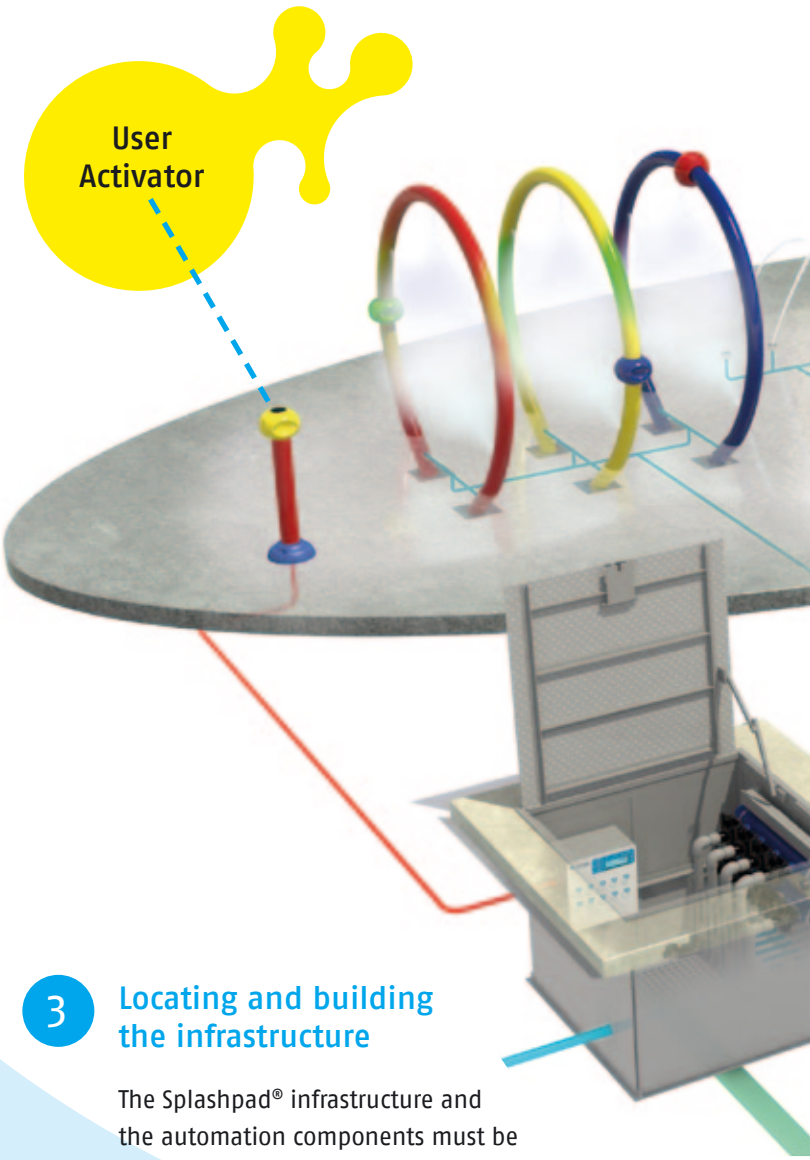
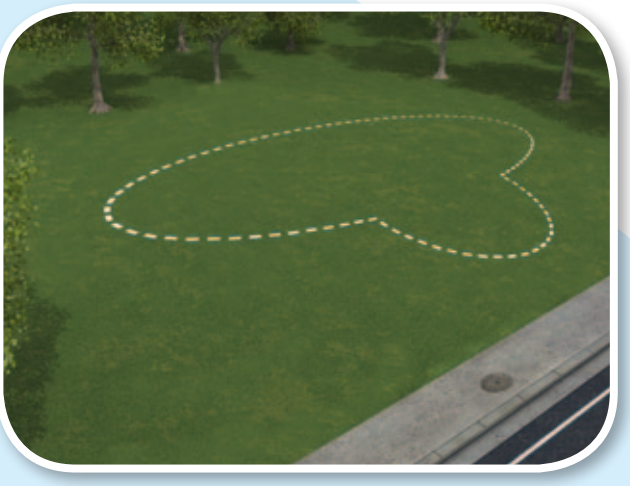
SPLASHPAD® IMPLEMENTATION

Smart Flow Splashpad®



1 Selecting a site and an exact location

The Splashpad® should be located in a park or site-section easily and universally accessible with proper site orientation and sun exposure.



2 Survey and implementation

Site conditions, slopes and soil capacity should be reviewed. Utilities such as drainage and electrical power must be surveyed and taken into consideration.

3 Locating and building the infrastructure

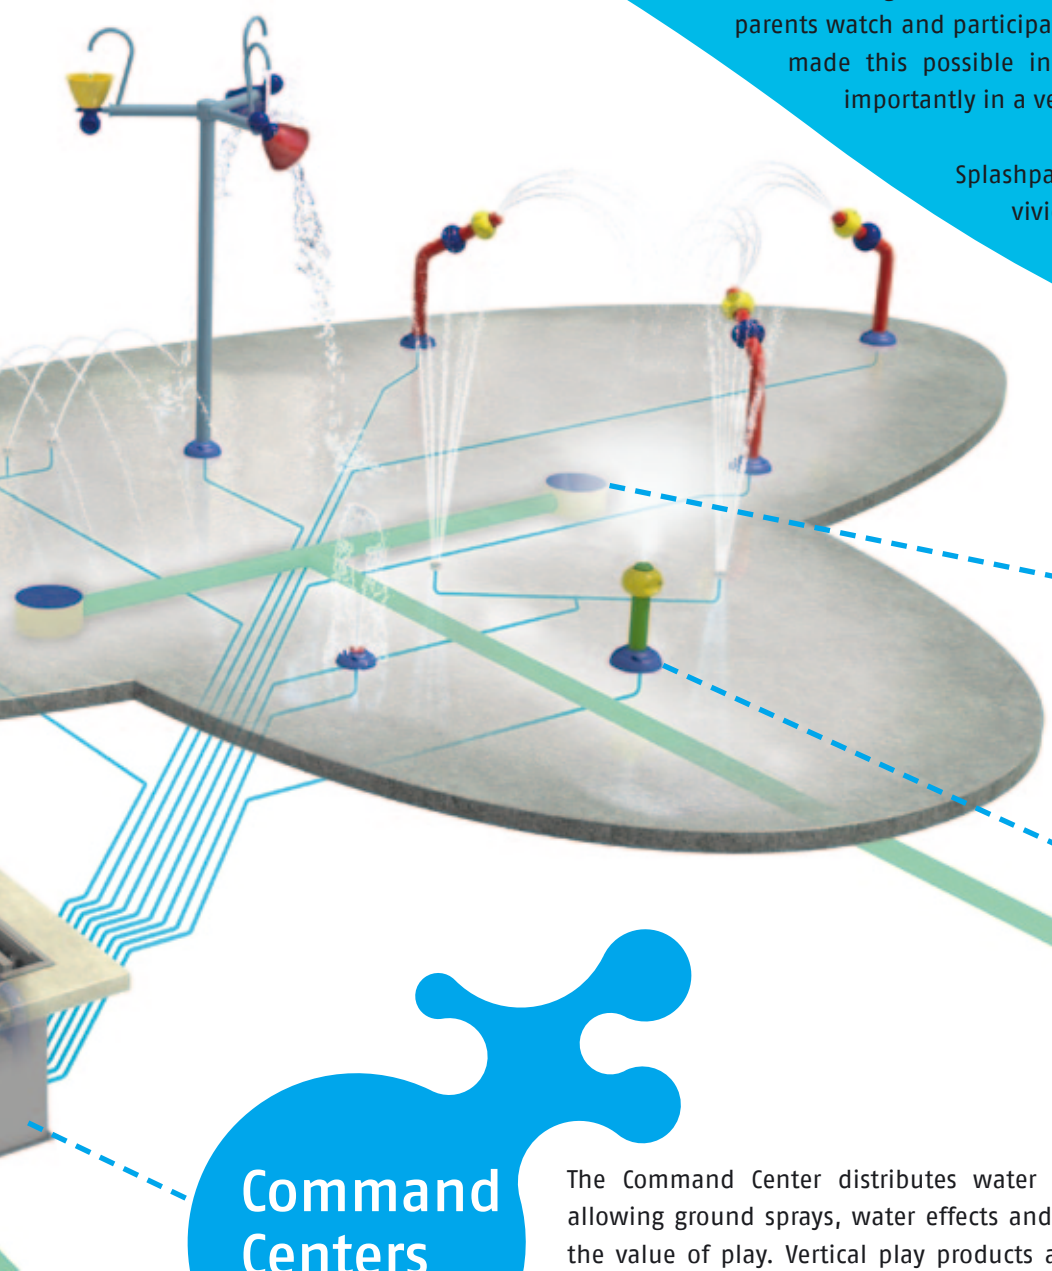
The Splashpad® infrastructure and the automation components must be orchestrated to optimize the operation of all planned play products.

Copyright © 2010 Vortex Aquatic Structures Intl.

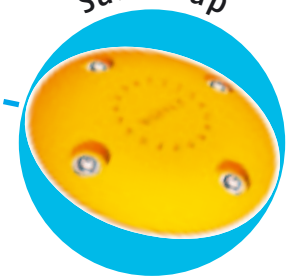
Start The Fun!

Just hear the laughter of infants, children and teens playing while parents watch and participate. By building a Splashpad® you have made this possible in a refreshing atmosphere and most importantly in a very safe environment!

Splashpad® will provide value of play, joy and vivid entertainment to users of all age groups within your community.



Safeswap



Toeguard™

Command Centers

The Command Center distributes water to the different features; allowing ground sprays, water effects and play products to optimize the value of play. Vertical play products and ground sprays operate at different times and locations to generate interest and interactivity within the Splashpad® zones.

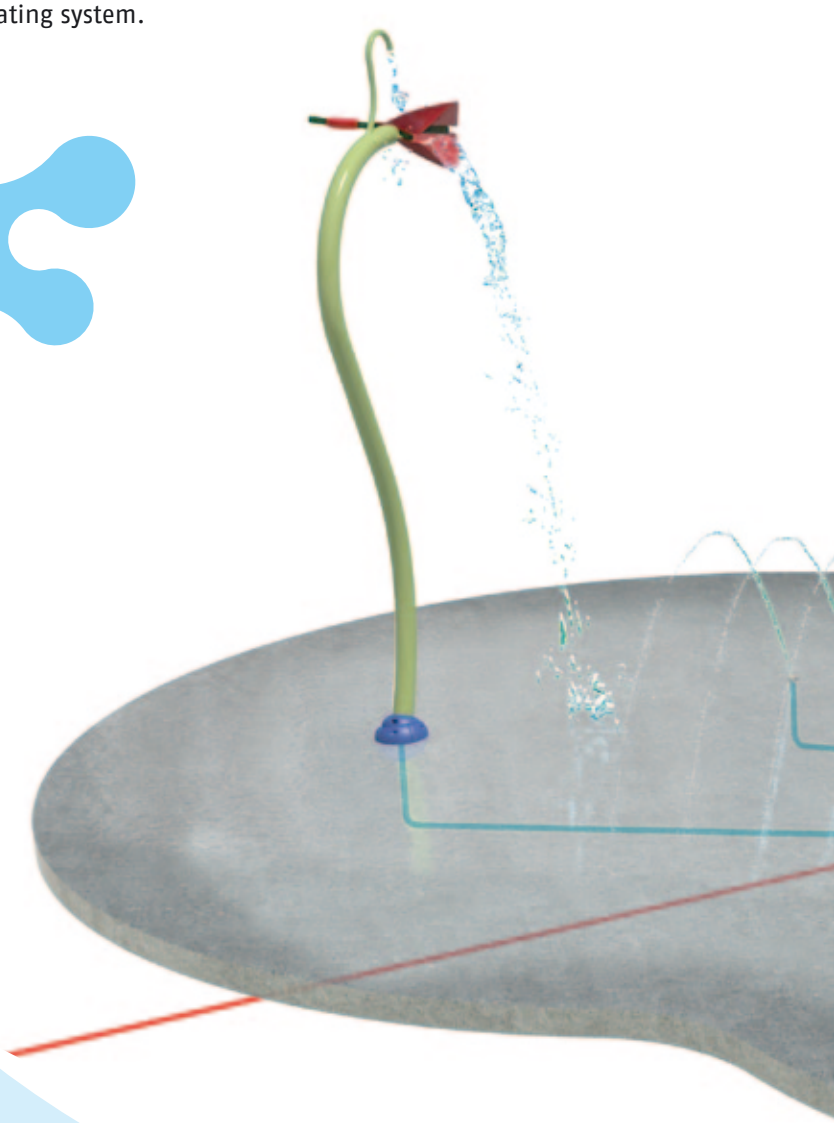
SPLASHPAD® FLOW OPTIONS

Technology for Smart Flow Splashpads®

Smart Flow Splashpads® are designed to minimize water consumption while maximizing the fun. The water supply to a typical Smart Flow Splashpad® is drawn from a municipal water system and returned to the environment or to a sanitary water system. The Smart Flow technology is the optimum choice for this type of Splashpad® providing a legitimate alternative to a water recirculating system.



Smart Flow Splashpad®

Smartpoint Command Center

A Splashpad® is a dynamic aquatic play area that provides endless fun for the entire family. This fully-automated solution combines the sensations of different natural water movements while providing a safe zero-depth recreation environment that does not require lifeguard supervision.

Municipal parks, aquatic centers, hotels and resorts, family recreation centers and amusement parks are just a few of the places where Splashpads® enrich community lifestyle and enhance guests' experiences.

Copyright © 2010 Vortex Aquatic Structures Intl.

fully-automated solution

safe zero-depth recreation environment

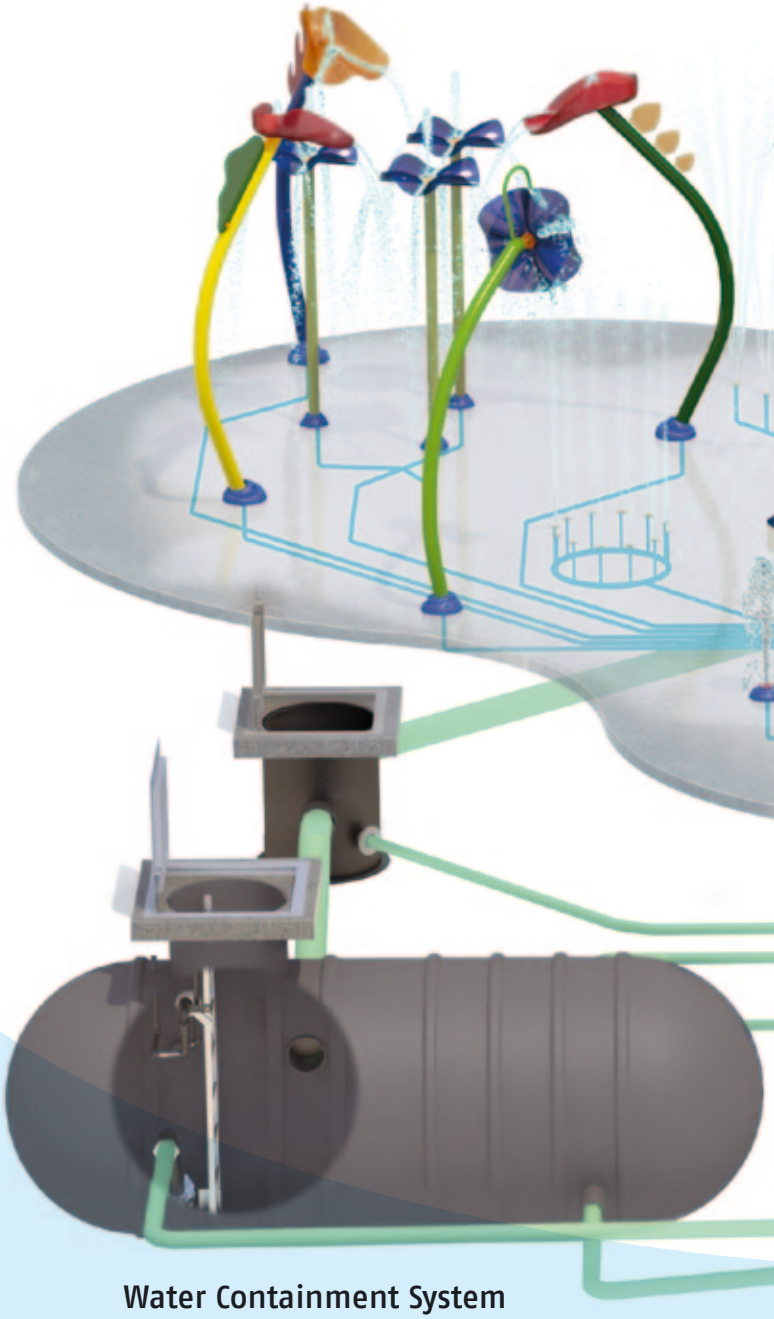
Vortex is the first manufacturer to go beyond the requirements of the newly established ASTM F2461-09 standard. This new industry standard imposes guidelines on how aquatic equipments are to be made, installed, operated and maintained. Vortex contributed to establish an industry wide normative design to protect users and the public.

Copyright © 2010 Vortex Aquatic Structures Intl.

SPLASHPAD® FLOW OPTIONS

Water Quality Management for High Flow Splashpads®

WQMS (Water Quality Management System) is Vortex's optimized water recirculation system for High Flow Splashpads® to keep the total water consumption as low as possible. WQMS by Vortex is a comprehensive solution to maintaining safe water quality. Engineered specifically for Splashpad® applications, this system has automated chemical control, integrated fail-safe protection and energy efficient pumps. These systems are factory assembled and tested to maximize quality and minimize installation costs.



Water Containment System

Water Containment System

A Splashpad® that recirculates water uses a holding tank that contains between 3000 and 10000 gallons of water based on the size and type of Splashpad®. Vortex offers various water utilization scenarios, from a high-flow system without recirculation to a Smart Flow Splashpad®.

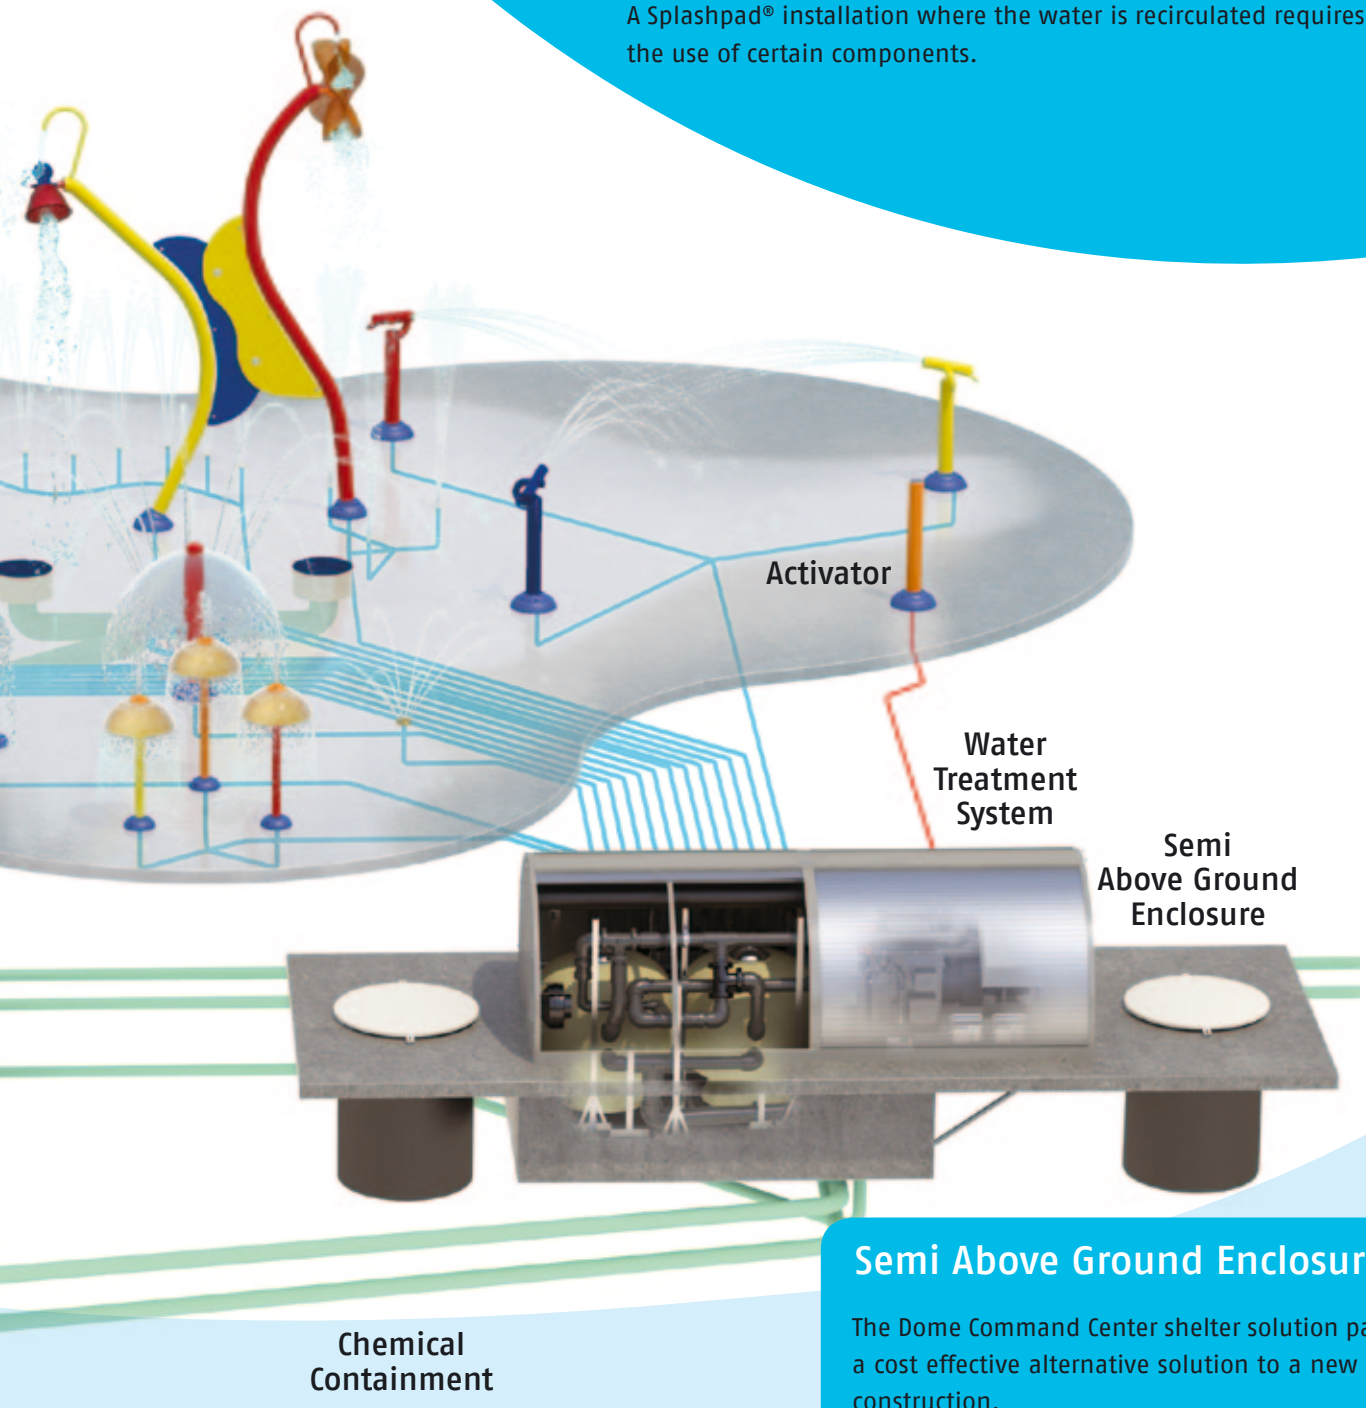
Copyright © 2010 Vortex Aquatic Structures Intl.

SPLASHPAD® IMPLEMENTATION

High Flow Splashpad®

Recirculation

A Splashpad® installation where the water is recirculated requires the use of certain components.



Semi Above Ground Enclosure

The Dome Command Center shelter solution package is a cost effective alternative solution to a new building construction.

The Dome structure contains the required equipment to make the Splashpad® work: command centers, pumps, filters, manifolds, etc...

Vortex's WQMS has been designed to reflect the current state of the art practices used in aquatics nowadays.

We are aligned with the most progressive design guidelines and norms within North America for reducing or eradicating health hazards linked with the quality of water within an aquatic facility and ensures that the principles applied are reliable through time.

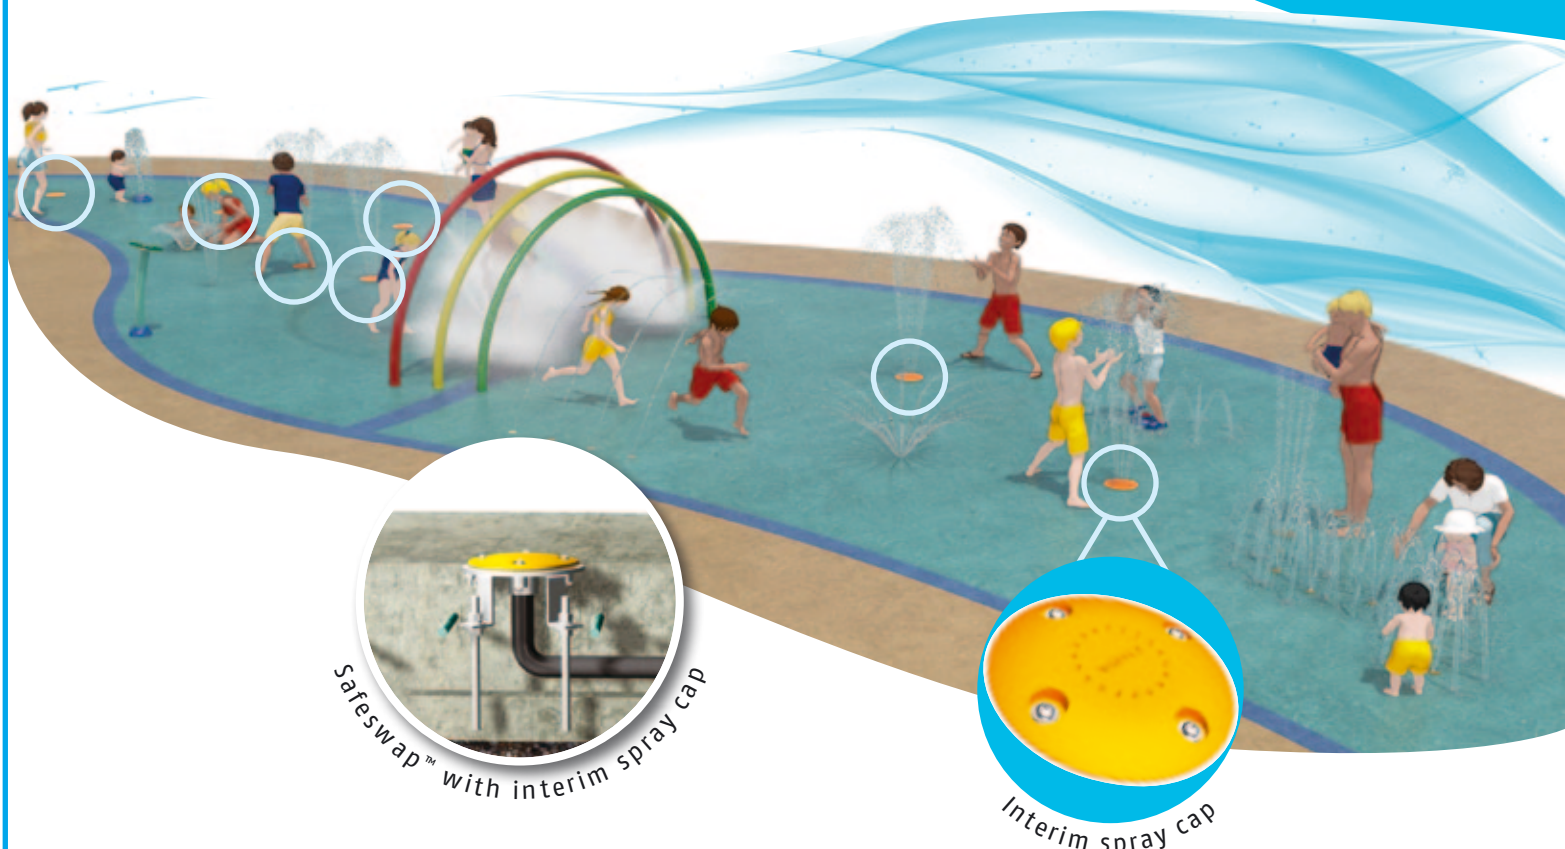
SPLASHPAD® EXPANDABILITY

Planning for the future within today's budget

Initial Installation:

Overcome initial budget constraints and allow yourself to offer new attractions later by incorporating extra Safeswap™ anchors during the construction phase. This maximizes the Splashpad's potential as a viable attraction that can grow with the demand.

Phase 1



Safeswap™ Anchoring System

The Safeswap™ anchoring system for play products offers expandability that ensures future fun is built into your current design. Interim spray caps generate a geyser water effect and cover unused anchors protecting users' feet.

Copyright © 2010 Vortex Aquatic Structures Intl.

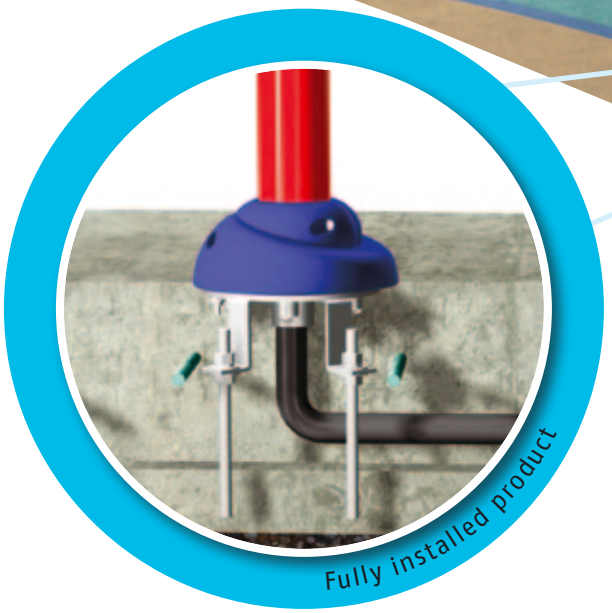
Expanded Installation:

Expanded Splashpad® with new play products added to the initial installation offers more water features and fun to a growing population.

Added Play Products

1. Watergarden Turtle N°1
2. Aqua Dome N°1
3. Leaf N°1
4. Leaf N°1
5. Watergarden Turtle N°1
6. Three Bells N°1
7. Flower N°3

Phase 2



With the Safeswap™ anchoring system you can interchange the position and relocate play products to maximize the play value of the Splashpad® throughout it's life cycle.

THEME & CUSTOMIZATION

Vortex has renowned experience in idealizing various customized projects and theme designing for our customers. In order to fit a specific theme of your choice, we are capable of customizing products. Our design team has the proper skills and the tools to meet and exceed your personal requests.

Vortex can go beyond their standard products through themed Splashpads® and customized Splashpads®. We can specifically build a concept with our existing products and also customize Splashpads® by building new pieces for fully customizing your solution.

Copyright © 2010 Vortex Aquatic Structures Intl.

Whether you want to offer the children a wet memorable experience with a fully customized product such as Hollywood Boulevard or a joyful experience in a themed design by a pirate's ship, our manufacturing team can specifically build a customized play area or additional products best suited for the theme requested within your area.

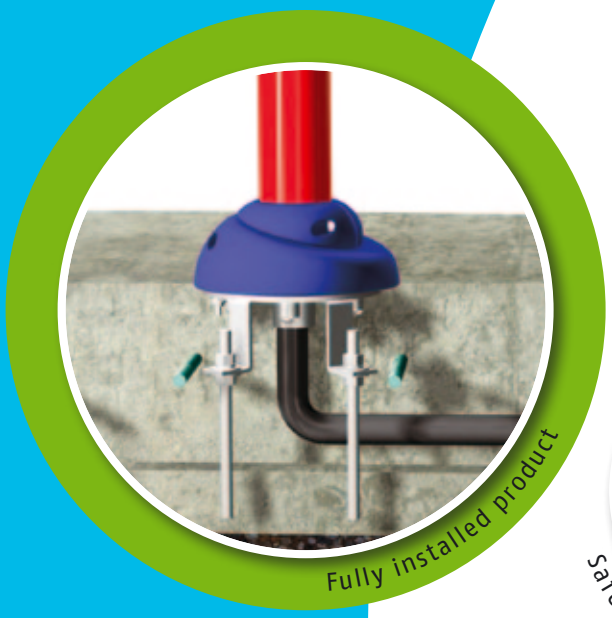
FEATURES AND BENEFITS



Fully installed product

Safeswap™ anchoring system

Universal attachment provides the flexibility to add, replace, or exchange play products at any time so that the initial infrastructure installation accommodates future play products.

Safeswap™ with interim spray cap

Interim spray cap

Seeflow™ Premium materials for extraordinary products

The visually appealing translucent components are made of impact-resistant Seeflow™ polymer which allows Splashpadders to see the flowing water and adds an element of fun while maintaining durability for all of our Splashpad® solutions. Splashpad® aquatic play products are manufactured using stainless steel, lead-free brass and high quality polymers for maximum durability and precision.

Colorful shadows created by Seeflow™ components

Toeguard™ – Safety and additional protection

Vortex products are known to be safe and reliable aquatic play products. We developed and introduced the Toeguard™ made of soft-touch elastomer to encase the anchoring of the play features and protect busy feet from hard bumps. Details such as recessed nozzles, spray heads, rotational joints and moving parts are designed and manufactured to prevent pinching and to keep fingers and toes safe. All products undergo rigorous testing and quality control protocols to ensure safety is maintained above all.

Sustainability through quality

Vortex Splashpad® systems are built to last and easy to maintain. The highest quality materials, technically proven components, and precise workmanship go into our play products, operating systems and accessories. Our effective and reliable after-sales support and industry leading warranty policies provide our customers with sustainable solutions and peace of mind for the future.
